

FONTO

Meeting the requirements of the architect, the power supply in the Serlachius Museum of Fine Arts in Goesta (FI) is unremarkable and discreet.

Project:	FONTO – Serlachius museum, Gösta (FI)
Specification :	The architect of the building wanted the smallest possible floor distributors with socket outlet + RJ45 which are seamlessly integrated in the floor (completely in black).
Solution:	Black anodised housings of the FONTO «Q120KA», as well as manganese-phosphated locking screw.
Articel:	FONTO Q120KA
Number of pieces:	126 Pieces
Equipment:	1×Schuko, 2×RJ45

Initial position

For the prestigious extension building of the Serlachius Museum of Fine Arts in Gösta (Finland), architectural requirements in particular were a decisive factor. The floor distributors should be as small as possible and also integrated in the floor surface. The architect also demanded that the housing colour should perfectly match the black floor surface. GIFAS also fulfilled this requirement to the fullest satisfaction – with black anodised housings.

Thanks to the excellent cooperation with our partner on site, we were able to realise a custom solution. The entire power supply was seamlessly and discreetly integrated in the exhibition floor of the museum in order to ensure the supply of power for the exhibitions, maintenance and cleaning crew. In total, 126 pieces of FONTO «Q120KA» were fitted and mounted with one earthed socket outlet or two RJ45 socket outlets.

Customer value

The FONTO series stands out due to the following properties:

- Sophisticated design (aluminium housing)
- Splash-water proof IP67
- All models can be driven over
- Can also be used out of doors
- Individual fabrication and mounting

Further information regarding the FONTO floor socket outlets can be found at www.gifas.ch

Areas of application

- Terraces
- Garden landscape
- Museums
