Starting situation

Niederrohrdorf in the canton of Aargau has decided to change the appearance of the municipality in various places. The premise was to increase the safety and well-being of the population, road users and pedestrians.

When it comes to combining safety aspects and an attractive appearance, GIFAS is the right partner: such projects are our speciality, as different products are required depending on the location and purpose of use.

In this case, the right system from our portfolio was found for the various application locations. A great opportunity to once again enjoy our motto «Quality with a system».

We would like to thank the municipality of Niederrohrdorf and all those involved for their trust in our solutions.

Customer benefits

- Consultancy, planning, material supply, support with installation issues (who takes care of what) → Everything from a single source
- Less bureaucratic effort due to short distances
- Increased safety in limited visibility conditions thanks to homogeneous lighting
- Functionality, safety and attractive appearance combined
- Power supply solutions, permanently installed, quickly ready for use – and just as quickly almost invisible again
